**Background**

We present detailed normative Moca data and cut-offs according to the DSM-5 criteria for cognitive impairment.

**Methods**

We performed regression analysis that provided percentile and Z-score for each subject's Moca score.

**Results**

In our cohort of 660 elderly people, Moca was administered on 660.

**Conclusion**

Normative data from a large Swedish population-based cohort:

The Montreal Cognitive Assessment.
